January-July 2011

Dear Biomedicans,

Welcome to our February Newsletter. Our main theme this month is environmental toxicity and its impact on Health.

Biomedic Health Corner gives you few important tips to help minimise electromagnetic stress caused by mobile phones.

Dr Bourne's article nicely summarises environmental toxicity and explains variety of its symptoms, while Kimberley Geck offers detailed analysis of electromagnetic pollution and ways to minimise its toxic effect.

Those interested in our evening talk on geopathic stress and bioresonance treatment, please e mail or telephone to book a place.

Sincerely,
Biomedic Founders

Dr Damir Shakambet MD

Dr Tatyana Bosh MD

Biomedic Health Corner

Few Tips for Mobile phone users:

1. **Try using text messaging or a loud speaker**
2. **Avoid wearing standard wired headset**
3. **Don't put the cell phone in your pocket or belt**
4. **Do not use the cell phone in enclosed metal spaces**
5. **Do not make a call when the signal strength is not full, four bars or less**
6. **During conversation, try to speak less and listen more,**

Biomedic Articles

Article Headline **Undersanding Toxic Load**

Dr Stephen Bourne

Common toxic influences that undermine homeostasis include dental mercury poisoning, psychological stress, geopathic stress and electro-magnetic field pollution, urban (petro-chemical) and agricultural (pesticide) pollution.

Toxic load poisons biological systems by inhibiting transmission of the bio-regulatory control signals that traverse the body fluids (matrix). These signals are resonating neuropeptides (hormones) that control cellular metabolism by activating receptor sites on cell membranes. If the body fluids (matrix) are clogged up with toxins, these bio-regulatory signals are impeded to the detriment of biological homeostasis.

Article Headline **Adverse Effect of Electromagnetic Radiation**

Kimberly S. Geck

Today we face a threat to our health that did not exist just over 100 years ago. Our modern technology has created a new form of pollution which we can't see, taste, or smell and its invisible nature has most unaware of its ever-increasing presence in both our personal and public environments. Since seeing is often a prerequisite to believing, we have relied on the most recent research to provide insight into how our technology is influencing our biology. Unfortunately, this research is not preceding the introduction of new technology, but rather comes much later as the concerns of the public mount while the government and technology companies continue to assert that all this unnatural, man-made radiation is 'safe'. With the now conclusive evidence of negative health effects from unnatural EMFs, it has become paramount that we learn not only what type and how much of this harmful radiation we are being exposed to, but also the best and most effective measures to protect ourselves and our families.
